

FRONT-END DEVELOPER (NY)

Third Summit was developed to serve creatives and clients in the media production industry, offering solutions for staffing, data management, orchestration and payment factoring. It's our vision to build a community of professionals across the digital media and advertising landscape, connecting talent in an unprecedented, future-looking way. Our growing ecosystem of products—including a freelance community for video professionals, cloud-storage platform and payment portal—eliminates many of the barriers to entry and pain points for freelancers, agencies, studios and brands. This is an exciting ground-floor opportunity for a talented full-stack developer to work directly alongside the founders of a well-funded, early-stage startup.

We're looking to build out our internal engineering team to help execute Third Summit's vision. You'll be joining a small but enthusiastically growing team that is trying to revolutionize the production freelance market and workflow. The ideal candidate works well in a fast-paced, deadline-driven environment and deals professionally with the entire business to meet goals.

In addition to a casual startup work environment, we offer health benefits, flexible time off and the opportunity to earn equity in the company.

Responsibilities

- Collaborate with the product and engineering team to design, implement and launch new features and products
- Work within established procedures and tools to commit and review code
- Ask relevant questions to clarify the business requirements
- Provide analysis of problems and recommend solutions
- Implement and maintain application software while following best-practice application security throughout the code life cycle
- Constantly be learning and developing your personal skills
- Stay in the loop and on top of the latest standards, changes and trends in the software field

Essential Skills & Experience

- 3+ years experience in software development
- Deep understanding of HTML5 and CSS3
- Proficiency in JavaScript, including DOM manipulation and the JavaScript object model
- Experience with JavaScript frameworks such as jQuery, Vue.js and React
- Consistently demonstrates follow-through in honoring commitments to customers and colleagues
- Good eye and passion for quality UI/UX design
- Proficiency with design tools such as Sketch, Photoshop, Figma, Omnigraffle, etc.

Preferred Competencies

- A good understanding of design best practices
- Experience with PHP, Laravel and MySQL
- Experience using Git, Gitflow, Bitbucket and Jira
- Experience with Mobile Development including iOS or Android
- Knowledge of the production and/or media industries
- Demonstrates a growth mindset, enthusiastic about learning new technologies quickly and applies the gained knowledge to address business problems
- Cultural awareness, resilience and a sense of humor are important for this role
- Excited to integrate with the external community (e.g. run meetups, attend networking events)
