

## ENGINEERING LEAD

Third Summit was developed to serve creatives and clients in the media production industry, offering solutions for staffing, data management, orchestration and payment factoring. It's our vision to build a community of professionals across the digital media and advertising landscape, connecting talent in an unprecedented, future-looking way. Our growing ecosystem of products—including a freelance community for video professionals, cloud-storage platform and payment portal—eliminates many of the barriers to entry and pain points for freelancers, agencies, studios and brands.

### **Job Description**

Great responsiveness, scalability, and resilience are all keys to a great customer experience. At Third Summit we obsess on these types of details. The Third Summit team is seeking a full stack engineering leader with a passion for great system design and attention to detail to develop a suite of applications to serve the media production industry, offering solutions for staffing, data management, orchestration and payment factoring. This is an exciting ground-floor opportunity for a talented full-stack developer to work directly alongside the founders of a well-funded, early-stage startup.

The ideal candidate is a brilliant problem solver, quick study, self starter, and excellent communicator with a passion for shipping quality products and bringing them to market quickly and efficiently. Rapid tools development with automation in mind and the ability to deliver results in a fast paced, loosely structured environment is a must. The candidate has the ability to quickly grasp and distill highly complex matters into clean, understandable solutions. He or she is an effective diplomat with strong communication, leadership, and organizational skills who is willing to prove him/herself within a company of talented individuals.

### **Key Qualifications**

- Demonstrated experience designing and maintaining large scale, real time platforms.
- Experience with at least one major language suited to web programming (such as JavaScript, Ruby, Java, Scala, or Python)
- Familiarity with at least one web application framework (such as Node, React, Rails, Django, or Play)
- Strong understanding of data modeling and storage with NoSQL and relational DBs
- Solid understanding of performance testing, improvement techniques and caching solutions
- Outstanding written and verbal communication skills
- Excellent collaborative skill
- Attention to detail
- Comfortable working in a loosely structured organization where you help the executive team define the process
- Highly professional, with the ability to deliver solid results on tight schedules

### **Education**

MS in Computer Science or equivalent work experience.

### **Additional Requirements**

- Familiar with micro service architectures and ability to decouple monolithic tech stacks
- Comfortable working in a multi-cloud environment
- Passion for product design, and for learning the landscape for creative professionals
- Previous experience working on payment platforms such as Finix or Stripe

### **Key Matching Terms**

image/video processing, pattern recognition, machine learning, full stack, micro services, lambda functions, web, python, Swift, HTML-5, css, React, Node.js, Vue.js, creative, fin-tech, postgres, mysql, NoSQL, mongo, elastic search, C++, Java, Scala, Cassandra, Performance
